

## Polyclonal Antibody against Mouse Adiponectin

**Catalog Number:** 12010

**Size:** 100 µg

**Host:** Rabbit

**Immunogen:**

Recombinant full-length mouse adiponectin expressed in mammalian cells

**Isotype/Preparation:**

Rabbit specific IgG was purified by mouse adiponectin affinity chromatography

**Specificity:**

The antibody detects three types of circular mouse/rat adiponectin and monomer (30kDa) adiponectin.

**Formulation:** Solution in PBS.

**Storage:**

Store at -20°C. For long-term storage, aliquot and freeze at -70°C. Avoid repeated freeze/thaw cycles.

**Application/Usage:**

**Western blot** - This antibody can be used at 0.1 – 0.2 µg/mL with the appropriate secondary reagents to detect mouse/rat adiponectin.

**ELISA** - This antibody can be used at 0.5 - 1.0 µg/mL with the appropriate secondary reagents to detect mouse/rat adiponectin.

**Immunoprecipitation** - See reference [1], [2]

**Western blot analysis of different complex formation of adiponectin in rat adipocytes using adiponectin rabbit anti-mouse antibody.**

### Introduction

Adiponectin, also termed gelatin-binding protein-28 (GBP28), AdipoQ, ACP30 (Acrp30), or apM, is a major adipocyte-secreted adipokine which abundantly present in the circulation as three distinct oligomeric complexes: LMW(67kDa), MMW(167kDa) and HMW(300kDa) adiponectin. Its levels are decreased in insulin resistant, diabetes and cardiovascular disease. Conversely, elevation of circulating adiponectin concentrations can alleviate various vascular dysfunctions in animal models, suggesting this adipokine exerts vasculoprotective effects. In addition, adiponectin may also be of importance in the development and progression of several malignancies.
